- **Hearts Sample Code**
  - Requirement and Environment
    - Python 2.7
    - pip install websocket-client
  - How to execute?
    - Enable the game node first.
    - Type "http://localhost:8080/" in your browser.
    - Create 3 "Dummy player" and 1 "Empty seat".
    - Click the "Enable watch mode to watch the game." If you need to watch the game.
    - Press "Start Game" button.
    - Before executing the Sample bot, you need to change the player_name and player_number in the following function. Please note that the player_name and player_number are the values you decide in the game node. The player_number should be unique. In the game node, the number 1 to 4 are reserved for Dummy players.

```python
def main():
    argv_count=len(sys.argv)
    if argv_count>2:
        player_name = sys.argv[1]
        player_number = sys.argv[2]
        token= sys.argv[3]
        connect_url = sys.argv[4]
    else:
        player_name=Your player name
        player_number=Your player number
        token="12345678"
        connect_url="ws://localhost:8080/"
    sample_bot=LowPlayBot(player_name)

myPokerSocket=PokerSocket(player_name,player_number,token,connect_url,sample_bot)
    myPokerSocket.doListen()
```

  - Execute the SampleBot.py to enable the sample bot.
